

A BIRTHRIGHT VENTURE

cofoundry

building the next generation of mission-driven
technology ventures.

BLUEPRINTS • BOARDS • BACKBONE

PARTNERSHIP INVITATION

PERMISSIONLESS PROSPERITY

July 9, 2026

dear partner,

every institution has a mission. cofoundry provides the venture-building capability to carry it into the world.

we are reaching out because we believe there is a meaningful alignment between what you are building and what cofoundry makes possible – a practical way to stand up accelerators, venture studios, ai adoption programs, innovation labs, and community technology initiatives through proven architecture, experienced operators, and a digital backbone that holds it together.

cofoundry is a venture infrastructure platform built by the birthright project, a 501(c)(3) nonprofit operating across africa, latin america, the caribbean, and the diaspora. every program we run is powered by three assets: blueprints (proven models), boards (experienced operators and global teams), and backbone (engineering, design, and ai systems).

this is an invitation to explore what a cofoundry-powered program could look like for your institution – whether that is creating new mission-driven ventures or helping communities adopt useful technologies at scale.

the pages that follow outline the platform, the programs, and the reach. if anything resonates, we would welcome the conversation.

with respect,

the cofoundry team

the birthright project · 501(c)(3)

cofoundry@thebirthrightproject.org

how it works

cofounding teams carry ventures further. cofoundry matches every venture with the right team, the right model, and the right tools – so every founder starts with company and a roadmap.

PROVEN BLUEPRINTS

business models, business plans, and program architectures drawn from ventures already in motion – adapted to your mission. what took years to learn is available on day one.

MATCHED TEAMS

deep market knowledge, experienced operators, and a technical + ai bench matched to every venture. we co-found alongside you, hands on the work. sponsor organizations also gain early leadership development for their mid-level staff through board seats and startup mentorship roles.

SPEED + REUSE

with the full stack – blueprints, tools, teams, and infrastructure – a venture can launch as a distributed multinational brand in as little as one month. experiments that deliver learnings become reusable assets for the next class, carried forward with every cohort. libraries and blueprints stay open and free to program alumni and staff of sponsor organizations – the value compounds long after the cohort ends.

the result: overall success rates go up – because every venture builds on what came before, with a team that's been matched to the mission.

the platform

three assets carry the work and allow programs to move from idea to launch.

BLUEPRINTS

proven program models, curriculum, venture templates, cohort structures, diagnostics, and handover frameworks – the reusable architecture behind every cofoundry deployment.

BOARDS

experienced operators and advisors from the birthright bench, dispersed groundwork teams across corridors, and peer founder networks building in adjacent markets – the judgment, reach, and pattern recognition behind execution.

BACKBONE

labs engineering, mmaadd studio design and production, ai agents, application portals, dashboards, reporting, and workflow automation – the technical and operational infrastructure that makes cofoundry a platform.

why this matters: cofoundry brings execution capacity – operators who build alongside you, with the tools and teams to carry a program from brief to launch.

what we build

one platform. two paths.

CREATE

mission venture creation

for institutions that want to create new mission-driven technology ventures.

venture studio as a service

accelerators and innovation labs

challenge prizes and eir programs

outcome: ventures, pilots, investable teams

ADOPT

mission technology adoption

for institutions that want useful technologies adopted at scale.

ai training for small businesses

nonprofit ai transformation

community technology programs

outcome: people using technology daily

focus areas: ai for social impact · workforce + mobility · health + wellbeing · education · climate resilience · civic technology · creative economy · financial inclusion · diaspora connectivity

reach + buyers

through groundwork, birthright's on-the-ground partner network, we run programs across africa, latin america, the caribbean, and the diaspora. a program can reach adamawa through partners who already live and work there.

WHO THIS IS FOR

CORPORATIONS

corporate foundations, csr +
esg teams, innovation offices

GOVERNMENTS

national and municipal
innovation offices, workforce
agencies

DEVELOPMENT

multilateral organizations,
development agencies, bilateral
funders

FOUNDATIONS

private and family foundations
with mission-driven portfolios

UNIVERSITIES

commercialization offices,
entrepreneurship centers,
research labs

INSTITUTIONS

any institution with a mission
and a desire to build ventures
around it

every institution has a mission. cofoundry becomes the *capability*.

we would welcome the opportunity to explore what a cofoundry-powered program could look like for your institution. whether you are looking to create new ventures, adopt technologies at community scale, or build lasting innovation infrastructure – the platform is ready.
